- f. Veterinaerpharmakologisches Institut, headed by Dr. <u>habil</u>. Benz (fnu). The Institute is engaged in testing various materials for poisons and in examining for purity veterinary medicaments. Its research interest is concentrated on the use of humane medical preparations for veterinary purposes.
- g. Institut fuer Huf- und Klauenbeschlage, headed by Professor Schleiter (fnu). This Institute is engaged in the study of new methods of shoeing animals. Special research projects concerning the effects of improper shoeing and neglect of care for the claws are being carried out. The Institute has a training smithy.
- h. Chirurgische Tierklinik, headed by Professor Schebitz (fnu). On the average there are 70 animals under treatment at the clinic. The clinic also carries out research work, which concerns the use of antibiotics in treating wounds, perlon net implantations, and thoracic operations.
- i. Medizinische Tierklinik headed by Professor Felix Mueller. This clinic usually has about 30 animal patients under treatment. These are for the most part cases which cannot be preperly diagnosed by the usual methods. The clinic is engaged in research on the use of antibiotics against animal plagues, particularly against erysepilis. It is also studying the diagnosis of pernicious anemia and the Borna sickness of horses.
- j. Geburtshilfliche und Ambulatorische Tierklinik headed by Professor Walter (fnu). About 25 animal patients are usually under treatment; these are for the most part cases of impeded births and embryotomies. The research work of the clinic is concerned with Caesarian births in cattle and swine, examination of sperm for suitability for breeding, and the connection between periodical disturbances and abortive insemination. The clinic is also doing research on procedures for combatting tuberculosis of animals.
- k. Tierpolyklinik fuer kleine Haustiere headed by Professor Schulze (fnu). Research is concentrated on the use and dosage of new medicaments for small animals. In addition, affiliated fields, such as the effect of contact insecticides on mammals and false teeth for valuable animals, are studied.
